

# Teeth Cleaning Package

Oral disease is the #1 health problem diagnosed in dogs and cats. Without proper care, 80% of dogs and 70% of cats will show the signs of disease by age 3. Unfortunately, most dental problems are progressive and without proper treatment it can cause pain and become untreatable.

By providing a proper oral care including professional cleaning, your pets will

- Live in less pain
- Be healthier
- Live longer
- Smell better
- Eat better

Our teeth cleaning service includes:

1. A general exam before anesthesia including evaluation of oral disease
2. Preanesthetic bloodwork
3. Oral examination of each tooth under anesthesia
4. Calculus (tartar) removal from the visible part of the tooth and below the gum line
5. Tooth Polishing
6. Antibiotic injection
7. Dental Charting
8. Therapy such as extractions with injection for pain\*
9. Fluoride application
10. Dental radiographs \*
11. Free fingerbrush kit
12. Free antiseptic oral rinse
13. Hill's t/d
14. A no fee follow-up appointment when extraction is performed\*

We also take the following steps to ensure the safety of the procedure:

1. IV catheter placement
2. Fluid administration
3. Use of safe anesthetic agents
4. Monitoring during anesthesia and during recovery
5. Bair Hugger Warming unit\*

\* Not applicable to all pets

Nail trim (free), anal gland expression, and microchip services are available upon request.
